SUMMARY

Senior Full Stack Software Engineer with 5+ years building production software: SaaS/B2B products, web applications and banking systems, with TypeScript, React, Next.js, Node.js, Supabase and SQL (Sybase/T-SQL). Designed and keep building a SaaS/PWA used daily by a professional club with ~800 athletes, and in banking, as the team's technical go-to, cut financial report execution time by up to 60%. English C1.

EXPERIENCE

Co-Founder & Lead Software Engineer · CAW Tech · Remote
Sep 2025 – Present
Products: Volley Manager (volleymanager.app) · ExpoLogic (expologic.online)

- Architected and built end to end **Volley Manager**, a production SaaS/PWA (Next.js, TypeScript, Supabase/PostgreSQL) that runs a professional volleyball club in Bolivia: **~800 athletes, ~15 staff and ~600 daily access events**.
- Automated club administration, finance, attendance and notifications, cutting **~80% of repetitive manual work**; integrated online registration and payments with Banco Económico (Bolivia) and access control via QR and consent-based facial recognition.
- The platform handles **165K+ requests/week at a 99.9% success rate** (Supabase) and has logged **15K+ visits since July 2026**; I also added coach-specific tools: an interactive scouting court, an AI assistant and voice-based scouting.
- Designed and built **ExpoLogic**, a multi-tenant B2B2C SaaS for fair organizers: interactive stand map with live availability, online reservations with a waitlist, payments with proof uploads, partial payments and an audit, and a 24/7 virtual fair (Next.js 16, React 19, Supabase with RLS, Vitest and Playwright).
- Took ExpoLogic from validation (~50 field interviews) and the **Emprende U 2026 semifinal, as one of 11 university-category finalists out of 300+ projects**, to **two pilot clients** and the move to production; featured by La Gaceta.

Software Developer (Banking) · CENSYS S.A. · Remote
Dec 2023 – Jul 2025
Banking software for Banco Sucrédito (main client) and other regional Argentine banks. Small team (tech lead, business analyst, PM and me) delivering large-scope requirements. Stack: PowerBuilder, Sybase/T-SQL, SOAP.

- Became the **team's technical go-to**, right below the tech lead. Worked daily with the client, and several of the solutions I built were later adapted for other banks.
- Delivered high-impact, high-data-volume requirements in Sybase/T-SQL (table changes, triggers, views and stored procedures) and, through query optimization, cut **complex financial report execution time by up to 60%**.
- Integrated the legacy system with **barcode readers** to automate credit-card statement payment processing: the operator scans the statement and the system locates the records and processes the payment.
- Built and improved accessibility-focused PowerBuilder screens (careful tab order), **fully operable by keyboard**, to speed up in-branch service.
- Maintained and modified core system code. Implemented ANSES (social security) regulatory requirements, host-to-host integrations and SOAP APIs validated with Postman, plus a forms development that was one of my largest requirements; supported UAT and post-deploy incidents.
- Supported onboarding of new team members as the team grew to ~8 people: task assignment, requirement follow-up and help with the codebase.

Front-End Engineer Intern, Web UI · Globant · Remote
Jul 2024 – Oct 2024 · part-time

- Helped cut **initial load time by ~20%** by improving UI rendering and lifecycle practices in React, TypeScript and Zustand apps.
- Selected from **~500 applicants** for Globant's intensive semi-senior (SSR) Web UI program.
- Worked in Agile teams with Git/GitHub workflows, code reviews and frontend architecture discussions.

Full Stack Web Developer (MERN) · TecnoLine · Tucumán, Hybrid
Jan 2023 – Dec 2023 · freelance

- Delivered end to end **12+ production web apps** (e-commerce, SPAs and admin systems) with React, Node.js, Express and MongoDB.
- Integrated APIs, payment gateways and external services, treating SEO, accessibility and PageSpeed as engineering requirements.
- Owned the full client cycle: discovery, build, deployment on Vercel/Render and ongoing support.

Front-End Web Developer · Freelance · Remote
Jun 2021 – Dec 2022

- Designed, built and launched websites for entrepreneurs and institutions, including hosting, deployment and maintenance.
- Built and sold reusable web templates.

TECHNICAL SKILLS

- **Frontend:** TypeScript, JavaScript, React, Next.js, TanStack Query, Zustand, Tailwind CSS, shadcn/ui, PWA
- **Backend & data:** Node.js, Express, REST and SOAP APIs, Supabase (Auth, Postgres with RLS, Storage), PostgreSQL, Zod, SQL, Sybase/T-SQL, MongoDB, Redis
- **Enterprise & banking:** PowerBuilder, host-to-host integrations, hardware integration (barcode readers), financial report optimization
- **Tools & practices:** Git/GitHub, CI/CD, Vercel, Render, Postman, Resend, Vitest, Playwright, TestSprite, code review, Scrum
- **Languages:** Spanish (native), English (C1)

EDUCATION

- Information Systems Engineering (in progress) · Universidad Tecnológica Nacional (UTN) · 2022 – Present
- Graduate Diploma in Data Science for Organizations · Universidad Nacional de Tucumán (UNT) · 2025
- International Program, Digital Companies & E-Business Revolution (scholarship) · California State University, Northridge (CSUN), USA · 2025
